PROFESSIONAL SUMMARY

DevOps & Automation Engineer with hands-on experience in building CI/CD pipelines, configuring cloud infrastructure, and automating complex environments. Proven ability to bridge development and operations leveraging Infrastructure as Code (IaC) and container orchestration. Strong background in Linux administration, Python development, and integrating GenAI-driven architectures to optimize workflows, accelerate delivery times, and ensure system reliability.

TECHNICAL SKILLS

Infrastructure & Cloud:	Linux (Ubuntu, Arch Linux, DigitalOcean), Windows Server, AWS
CI/CD & DevOps:	Docker, Kubernetes (K8s), Terraform, OpenTofu, Helm, Jenkins, Git
Languages & Scripting:	Python, Bash, Node.js, TypeScript, JavaScript, SQL
Automation & Testing:	Appium, Selenium, Pytest, REST API testing, OOP architectures (POM)
GenAI & LLMs:	LLM APIs (OpenAI, Claude), LangChain, RAG architectures, AI Agents

EXPERIENCE

Automation Engineer | *Qualitest (Bank Hapoalim Project)* **August 2025 - Present | Tel Aviv**

- **Framework Development:** Engineered a comprehensive, highly scalable automation architecture from scratch utilizing Python and Page Object Model (POM) for native mobile applications.
- **CI/CD Integration:** Integrated automated test suites directly into CI/CD pipelines to enable concurrent execution, shifting from local testing to automated infrastructure.
- **Environment Management:** Configured and managed test environments utilizing Appium and Selenium, providing self-service test execution capabilities for cross-functional development teams.
- **GenAI Workflow Enhancements:** Spearheaded the integration of LLM APIs and AI agents into the development workflow, building intelligent proxy tools to optimize test orchestration.

Freelance Infrastructure Engineer | *Various Clients* **February 2022 - March 2024**

- Administered and maintained backend services on a DigitalOcean Linux server environment, managing deployments and configuration via SSH.
- Managed network security and traffic routing, configuring open ports and firewall rules to ensure external service availability and secure access.
- Developed automation and logging scripts in Bash and Python to streamline server maintenance and monitor application uptime.

System Administrator & Infrastructure Tech | *IDF Air Force (Classified Unit)* **2019 - 2022**

- **System Administration:** Administered Windows Servers and Active Directory, managing permissions and access control for 1,000+ users nationwide in a 24/7 high-availability network.
- **Automation & Scripting:** Designed automated self-service resolution systems for a closed network, drastically reducing manual technician interventions for common IT issues.
- **Monitoring & Diagnostics:** Developed a diagnostic chatbot and real-time monitoring dashboard for tracking system health across 500+ endpoints, optimizing operational efficiency.

DEVOPS & CLOUD ARCHITECTURE PROJECTS

End-to-End Cloud-Native Infrastructure Deployment | *Independent Capstone Project*

- **Infrastructure as Code (IaC):** Provisioned a highly available and scalable cloud network on **AWS** utilizing **Terraform**, ensuring a fully reproducible cloud environment.
- **Containerization & Orchestration:** Packaged microservices utilizing **Docker** and orchestrated the deployment lifecycle across a **Kubernetes (K8s)** cluster, ensuring high availability and seamless load balancing.
- **CI/CD Automation:** Engineered a fully automated integration and deployment pipeline utilizing **Jenkins** and **Git**, streamlining the code transition from development to the production cluster.

EDUCATION

- **John Bryce Tel Aviv** | DevOps Engineering Bootcamp - Graduated with High Honors
- **Amal Holtz Multidisciplinary Air Force High School** | High school studies in Electronics and Computer Science
