PROFESSIONAL SUMMARY

Junior DevOps & Platform Engineer with a broad systemic vision, strong technical aptitude, and a proven ability to learn quickly. Experienced in Python development, Linux server administration, and building robust automation architectures from scratch. Hands-on experience with container orchestration, infrastructure-as-code (IaC), and GenAI integrations. Adept at bridging the gap between infrastructure, operations, and development to accelerate time-to-market and ensure system reliability.

TECHNICAL SKILLS

Infrastructure & Cloud:	Linux (Ubuntu, Arch Linux, DigitalOcean), Windows Server, AWS
CI/CD & DevOps:	Docker, Kubernetes (K8s), Terraform, OpenTofu, Helm, Jenkins, Git
Languages & Scripting:	Python, Bash, Node.js, TypeScript, JavaScript, SQL
Automation & Testing:	Appium, Selenium, Pytest, REST API testing, OOP architectures (POM)
GenAI & LLMs:	LLM APIs (OpenAI, Claude), LangChain, RAG architectures, AI Agents

EXPERIENCE

QA & QA Automation Tester | Qualitest (Bank Hapoalim Project)

August 10, 2025 - Present | Tel Aviv

- Engineered a comprehensive mobile native Android application automation architecture from the ground up, constructing components utilizing the Page Object Model (POM) to ensure highly scalable testing frameworks.
- Automated 200+ complex test cases by executing driver functions via the standard Python Selenium library connected to an Appium server environment, providing self-service test execution for developers.
- Integrated automated test suites directly into CI/CD pipelines to enable concurrent execution, shifting from local testing to automated infrastructure and accelerating time-to-market.
- Integrated Generative AI (LLM APIs, AI agents) into the development workflow, building AI-powered proxy tools and intelligent test orchestration systems.

Freelance Infrastructure Engineer | Various Clients

February 2022 - March 2024

- Administered and maintained backend services on a DigitalOcean Linux server environment, managing deployments and configuration via SSH.
- Managed network security and traffic routing, configuring open ports and firewall rules to ensure external service availability and secure access.
- Developed automation and logging scripts in Bash and Python to streamline server maintenance and monitor application uptime.

Communications Systems Tech & Advanced Computing | IDF Air Force

Classified Operational Command Unit

- Designed automated systems for a closed network, including an IT self-service resolution system - eliminating technician intervention for common issues.
- Developed a diagnostic chatbot and real-time monitoring dashboard for system issues across 500+ end-user stations, saving substantial operational budget.
- Administered Windows Servers, Active Directory, and managed permissions for 1,000+ users nationwide in a 24/7 high-availability environment.

DEVOPS ENGINEERING PROJECTS (JOHN BRYCE)

- **Cloud Provisioning & IaC:** Provisioned scalable cloud infrastructure on AWS utilizing Terraform to establish highly reproducible environments.
- **Container Orchestration:** Containerized application environments using Docker and orchestrated deployments with Kubernetes (K8s) to manage microservices.
- **CI/CD Pipeline Design:** Built and maintained automated integration and deployment pipelines using Jenkins and Git to streamline the development lifecycle.

EDUCATION

John Bryce Tel Aviv

DevOps Engineering Course (605 hours) - Graduated with High Honors

Amal Holtz Multidisciplinary Air Force High School

High school studies in Electronics and Computer Science
