

Maor Idi

Tel Aviv | maoridi.com | maoridi16@gmail.com | 052-5705588

Professional Summary

DevOps and Platform Engineer with a broad systemic vision, strong technical aptitude, and a proven ability to learn quickly. Experienced in Python development, Linux server administration, cloud infrastructure (AWS), and building robust automation architectures from scratch. Hands-on experience with Generative AI tooling, LLM integration, and AI-driven development workflows. Adept at managing hybrid environments, building internal developer tools, and bridging the gap between infrastructure, operations, and development.

Technical Skills

- **Infrastructure & Cloud:** Linux (Ubuntu), Windows Server, VMware, AWS
- **CI/CD & DevOps:** Docker, Kubernetes (K8s), Terraform (IaC), Jenkins, Monitoring Tools
- **Languages & Scripting:** Python, PowerShell, Node.js, TypeScript, JavaScript, Bash, SQL
- **GenAI & LLMs:** LLM APIs (OpenAI, Claude), LangChain, RAG architectures, AI Agents, Prompt Engineering
- **Automation & Testing:** Appium, REST API testing, OOP architectures, Concurrent execution frameworks
- **Architecture & APIs:** REST API Integration, Active Directory, MySQL, Self-Service platform tooling
- **Languages:** Hebrew (Native), English (Fluent)

Experience

QA & Infrastructure Automation Engineer | Qualitest (Bank Hapoalim Project)

August 2025 – Present | Tel Aviv

- Engineered a comprehensive automation testing architecture from the ground up in Python (OOP), serving as an internal platform tool for the mobile development team.
- Automated 200+ complex test cases across Mobile, Web UI, and REST API endpoints using Python and Appium, providing self-service test execution for developers.
- Integrated Generative AI (LLM APIs, AI agents) into the development workflow - built AI-powered proxy tools and intelligent test orchestration systems.
- Eliminated manual testing bottlenecks, enabling concurrent execution and significantly accelerating the team's time-to-market.

Freelance Infrastructure & Automation Engineer | Various Clients

February 2022 – March 2024

Consolidated experience: Busy With AI, Kovach Technologies, Ghost Squawk

- Provisioned, configured, and maintained Ubuntu Linux server environments across cloud platforms, building infrastructure-as-code practices.
- Developed robust automation, monitoring, and logging scripts in Python - reducing manual administration overhead and improving system reliability.
- Designed and integrated REST APIs to facilitate seamless communication between backend services.

Military Experience

Communications Systems Technician & Advanced Computing | Israel Defense Forces (IDF) — Air Force

Classified Operational Command Unit

- Designed automated systems for a closed network, including an IT self-service resolution system - eliminating technician intervention for common issues.
- Developed a diagnostic chatbot and real-time monitoring dashboard for system issues across 500+ end-user stations, saving substantial operational budget.
- Administered Windows Servers, Active Directory, and managed permissions for 1,000+ users nationwide in a 24/7 high-availability environment.
- Maintained RF systems, satellite communications, and VOIP/ROIP-based communication systems.

Education

- **John Bryce (By Matrix):** DevOps Engineering Course (605 hours) — Graduated with High Honors
- **Codecademy:** Node.js (2024), Python (2021)
- **Holtz Air Force Technical School:** High school studies in Electronics and Computer Science (5 units each)
