

Maor Idi

Serlin Yosef 10, TLV | ID 214194383 | maoridi.com | maoridi16@gmail.com | 17.07.2003 | 052-5705588

❖ Professional Summary

Passionate DevOps and Automation Engineer with a broad systemic vision, strong technical aptitude, and a proven ability to learn quickly. Experienced in Python scripting, Linux server administration, and building robust automation architectures from scratch to eliminate manual overhead. Adept at managing environments, configuring infrastructure, and bridging the gap between testing, operations, and development.

❖ Technical Skills

- **Infrastructure & OS:** Linux (Ubuntu/Server), Windows Server, VMware, Digital Ocean.
- **CI/CD, Cloud & DevOps Tools:** Docker, Kubernetes (K8s), Terraform (IaC), AWS, CI/CD Pipeline Automation, Git/GitHub, and monitoring tools.
- **Scripting & Languages:** Python, PowerShell, Node.js/JavaScript/TypeScript, HTML/CSS, SQL.
- **Automation & Testing:** Appium, Android Studio, Xcode, Object-Oriented Programming (OOP) architectures.
- **Architecture & APIs:** API/REST integration, Active Directory (A.D.), MySQL.
- **Languages:** Hebrew (Native), English (Fluent).

❖ Experience

❖ **Qualitest (Bank Hapoalim Project) | QA & QA Automation Engineer**

August 2025 – Present | Tel Aviv

- Designed and engineered a comprehensive automation testing architecture from the ground up utilizing Object-Oriented Programming (OOP) in Python.
- Automated over 200 complex test cases across Mobile Applications, Web UI, and API/REST endpoints.
- Orchestrated mobile emulator testing environments using Appium, Android Studio, and Xcode for comprehensive cross-platform coverage.
- Reclaimed critical engineering hours by eliminating manual testing bottlenecks, enabling concurrent execution and greater focus on system improvements.

❖ **Freelance Infrastructure & Automation Engineer | Various Clients**

February 2022 – March 2024 (Consolidated experience providing infrastructure and development services for Busy With AI, Kovach Technologies, and Ghost Squawk)

- Provisioned, configured, and maintained Linux (Ubuntu/Server) server environments across cloud platforms including Digital Ocean.
- Developed robust automation, monitoring, and logging scripts using Python, significantly reducing manual administration overhead.
- Designed and integrated RESTful APIs to facilitate seamless communication between backend services.

❖ Military Experience

Israel Defense Forces (IDF) | Communications Systems Technician & Advanced Computing.

Classified Operational Command Unit, Air Force

- Developed two major efficiency proposals in a closed network, including an automated system to resolve IT issues without technician intervention.
- Built a diagnostic chatbot and a real-time monitoring dashboard for hardware/software issues, saving substantial budget and operational time across 1,000+ real-time situations.
- Administered Windows Servers, Active Directory (A.D.), and managed permissions for over 1,000 users nationwide in a 24/7 high-availability environment.
- Maintained RF systems, satellite communications, and provided operational feedback on VOIP- and ROIP-based communication systems.

❖ Education

- **John Bryce (By Matrix):** DevOps Engineering Course (605 hours) - Graduated with High Honors.
- **Codecademy:** Node.js (2024), Python (2021).
- **Holtz Air Force Technical School:** High school studies in Electronics and Computer Science (5 study units in Electronics, 5 study units in Computer Science).
